Capability Statement

P&A Sol provides the services the US Government requires to meet its mission of delivering value and savings in technology by providing innovative, collaborative, and cost-effective IT solutions and services to customers. Our company remains relevant in the IT industry by applying business analysis, innovation, and knowledge management.

IT firms have two distinct areas which they focus on: the problem space and the solution space. Solving problem's is in IT's DNA, unfortunately IT firms aren't as good as defining what problems they are truly trying to solve which is where P&A Sol enters. Our company focuses on the problem space just as much as the solution space in order to meet our delivery of value and savings.

Our company also takes a different approach towards innovation. IT companies have always been innovative in many areas but the most urgent need is to become innovative in the area of solution delivery. As a small business, our solution firm can be very flexible in delivering services that our customers need especially while we're performing the contract.

Founders:

Argent Rhealm: Argent is a co-founder and the majority owner of P&A Sol with 8 years of programming, 5 years of management, and 6 years of finance experience.
